

MUT-38 cr2 mt-

Cat. No. ALS-01246

Lot. No. (See product label)

Subcategory

Mutants

Description

The cr2 mutant is deficient in chloroplast ribosomes and accumulates 54S subunit particles. This strain is the product of a cross of the original mutant to a wild type strain equivalent to MUT-124. When last tested, this strain could be scored as acetate requiring on minimal medium at 15-17 °C.

Species

Chlamydomonas

Phenotype

Cold sensitive on minimal medium

Culture Temperature (°C)

15-17
