

MUT-864 nic13 mt+

Cat. No. ALS-01510

Lot. No. (See product label)

Subcategory

Mutants

Description

UV-induced, nic13 is a good marker for linkage group X. It is best scored by sensitivity to 3-acetyl pyridine. It has shown that it is a mutation in the gene encoding NAD⁺ synthetase.

Species

Chlamydomonas

Locus

NIC13 [NSN1]

Chromosome

10

Phenotype

Requires nicotinamide
