

MUT-891 y uvs1 mt+

Cat. No. ALS-01523

Lot. No. (See product label)

Subcategory

Mutants

Description

The uvs1 mutation was induced in the 137c background, using nitrosoguanidine as mutagen. It was found that the uvs1 mutant is blocked in dark excision of thymidine dimers. This is not the same mutation as the UVS1 mutant.

Species

Chlamydomonas

Phenotype

UV sensitive
