

MUT-912 NG13 (lf2) mt+

Cat. No. ALS-01534

Lot. No. (See product label)

Subcategory

Mutants

Description

This mutant was obtained in the 137c background, using nitrosoguanidine as mutagen, and was originally designated NG13, the name under which we received it from CCAP. It has long flagella and was subsequently renamed lf2. MUT-803 is the same allele and is the strain that we normally distribute for lf2. Please see the notes on that strain for additional information and reference citations on the LF2 locus.

Species

Chlamydomonas

Locus

LF2

Chromosome

12
