

MUT-1045 F20 mt+

Cat. No. ALS-01612

Lot. No. (See product label)

Subcategory

Mutants

Description

F20 is a mutation in the chloroplast PsaB RNA-binding protein encoded by the TAB2 locus. Another mutant, F14, is the only allele at this locus whose exact mutation is known, but F12, F20 and M27 were previously found to be in the same complementation group with F14.

Species

Chlamydomonas

Locus

F20 [TAB2]

Chromosome

17

Phenotype

Requires acetate
