

MUT-1998 arg4 mt-

Cat. No. ALS-02107

Lot. No. (See product label)

Subcategory

Mutants

Description

Mutants at the ARG4 locus are deficient in ornithine carbamoyltransferase. However, this strain currently does not show a clean arginine requirement and needs to be outcrossed to recover the original mutation if possible. This is the original arg4 mutant, UV-induced. Please see MUT-1997 for more information.

Species

Chlamydomonas

Locus

ARG4 [OTC1]

Chromosome

12

Phenotype

Requires arginine (suppressed)
