

MUT-3357 far1-7 nit1-1 pf14 T(NIT1 NIT1/pf14) mt+ [Zhang SW36]

Cat. No. ALS-02778

Lot. No. (See product label)

Subcategory

Mutants

Description

The far1 (free from ammonia repression) mutants were isolated by insertional mutagenesis or by selection of spontaneous mutants with constitutive expression of the NIT1 (nitrate reductase) gene in the presence of ammonia. MUT-3357 is the far1-7 mutant, which was isolated in a pf14 background after transformation with the wild-type RPS3 (PF14) gene as a reporter for expression from the NIT1 promoter).

Species

Chlamydomonas

Locus

FAR1, PF14 [RSP3]

Chromosome

1,6
