

MUT-3659 thi9 mt+

Cat. No. ALS-02972

Lot. No. (See product label)

Subcategory

Mutants

Description

From a cross of MUT-125 x MUT-26. This strain requires thiamine (or yeast extract) for growth. However, like most other thi mutants, it is difficult to score on minimal medium. Restreaking or plating at low dilution will be helpful.

Species

Chlamydomonas

Locus

THI9

Chromosome

2

Phenotype

Requires thiamine
