

MUT-4811 rbcL-V341I mt+

Cat. No. ALS-03947

Lot. No. (See product label)

Subcategory

Mutants

Description

Directed mutagenesis and chloroplast transformation of rbcL Δ -25B1 mt+ (MUT-4700) were used to create a V341I substitution (GTT-ATT) in the Rubisco large subunit. This is the original mutant strain. It was created to investigate phylogenetic differences near large-subunit residue Val-331 (see rbcL-V331A). The strain has been maintained with acetate medium in darkness to prevent selection for secondary mutations that may improve Rubisco function.

Species

Chlamydomonas

Locus

rbcL

Chromosome

Chloroplast
