

Natural Mica-Based Pearlescent Pigment

Cat. No. SCP-001

Lot. No. (See product label)

Product Name

Natural Mica-Based Pearlescent Pigment

Product Description

Our natural mica pearlescent pigments offer brilliant luster, soft-to-strong shimmer, and excellent durability. These pigments are made from high-purity natural mica coated with titanium dioxide and metal oxides. We offer silver-white, interference, gold luster, colored luster and metallic luster series.

Product Series

Silver white series. Classic pearlescence with a soft, silky shine.

Interference series. Iridescent color shifts that change with the viewing angle.

Golden luster series. Luxurious gold tones for elegant finishes.

Chromatic luster series. Vibrant, colorful brilliance with high saturation.

Metal luster series. Metallic-like shine with strong reflectivity.

Key Features and Benefits

Brilliant whiteness, sparkle, and gloss for a premium finish

A wide range of particle sizes to suit different applications

Improved seed flow and sowability for more efficient planting

Faster drying time when used as a finishing powder

Elevate the visual appeal of coated seeds and streamline processing and enhance handling efficiency.

Applications

Seed coating appearance. Enhance the appearance and functionality of seed coats.

Other Notes

Our pearlescent pigments are also used in various other applications, including cosmetics, plastics and masterbatches, coatings and paints, and printing inks.
