

Color Pearlescent Pigment

Cat. No. SCP-003

Lot. No. (See product label)

Product Name

Color Pearlescent Pigment

Product Description

This product is made of mica powder as a base material, which is covered with a transparent film of metal antioxidant with high refractive index. Pearlescent pigments are based on the principle of nature's pearls and utilize the refraction, reflection and transmission of light to give a soft, elegant pearlescent luster.

Product Series

Silver white, iridescent, pearlescent gold, crystal super white and gold, color-changing pearlescent powder and other series.

Key Features and Benefits

Environmentally friendly, non-toxic and odorless. Resistant to high temperature, acid and alkali.

Applications

Seed coating.

Other Notes

This product can make the appearance of seeds shiny after coating, with good visual effect, and increase the sales price of seeds. It has an anti-insect function, which effectively reduces insect problems during seed storage and sowing, and reduces seed wastage.
