

Dipeptide Diaminobutyroyl Benzylamide Diacetate

Cat. No. CAP-009

Lot. No. (See product label)

Product Name

Dipeptide Diaminobutyroyl Benzylamide Diacetate

CAS No.

823202-99-9

Product Description

Dipeptide diaminobutyroyl benzylamide diacetate is a cosmetic ingredient used to reduce the appearance of wrinkles by relaxing facial muscles, similar to an injectable muscle relaxant but without the needle. It is a biomimetic peptide that can improve skin texture and firmness by stimulating collagen and elastin production and is safe for use with other anti-aging ingredients like vitamin C.

Product Effect

Reduce wrinkles. Inhibits facial muscle contractions, thereby helping to soften expression lines caused by repetitive movements.

Promote collagen and elastin production. Stimulates the production of collagen and elastin, which are crucial for skin strength, firmness, and elasticity.

Improve skin texture. Enhances the overall texture and appearance of the skin.

Molecular Formula

C₂₃H₃₇N₅O₇

Storage

Store protected from direct light and humidity at a temperature between 10°C-25°C to maintain product integrity.
