

Ammonium Carbonate Powder

Cat. No. FIP-001

Lot. No. (See product label)

Product Name

Ammonium Carbonate Powder

Form

Powder

Color Appearance

White color powder.

Product Applications

Nutritional supplements, cosmetics, herbal teas, capsules, tablets, functional foods and beverages.

Product Offerings

Ammonium carbonate powder.

Product Description

Ammonium carbonate powder, also known as baker's ammonia, hartshorn, or sal volatile, is a white, crystalline salt with a strong ammonia odor. It is a volatile leavening agent commonly used in baking to produce light and airy textures in cookies and crackers. Additionally, it serves as a buffering agent, pH regulator, and smelling salt in various industrial and pharmaceutical applications. Ammonium carbonate decomposes into ammonia, carbon dioxide, and water when exposed to heat, leaving no residue.
