

Corn Powder

Cat. No. *FIP-006*

Lot. No. (See product label)

Product Name

Corn Powder

Parts Used

Corn

Form

Powder

Color Appearance

White color powder.

Product Applications

Nutritional supplements, cosmetics, herbal teas, capsules, tablets, functional foods and beverages.

Product Offerings

Corn flour, corn powder.

Product Description

Corn powder, derived from maize, is a versatile and widely used agricultural product with a multitude of applications. It is created by grinding dried corn kernels into a fine, powdery substance. Known for its mild, slightly sweet flavor, corn powder serves as a fundamental ingredient in both culinary and industrial realms. In the culinary domain, it finds its way into recipes as a thickening agent for soups, stews, and sauces, imparting a subtle corn essence. Additionally, it is a staple in baking, enhancing the texture and flavor of baked goods like cornbread, muffins, and pancakes. Beyond the kitchen, corn powder is harnessed industrially to create corn-based products, including cereals, snacks, and processed foods.
