

Corn Peptide

Cat. No. EXT-164

Lot. No. (See product label)

Product Name

Corn Peptide

Product Overview

The product belongs to plant extract.

Source

Corn peptide is a protein extracted from natural food corn, and then obtained by directed enzyme digestion and specific small peptide separation technology.

Form

White to slightly yellow powder

Synonyms

Corn Peptide

Function

1. Hypotensive health products: Corn peptide can inhibit the activity of angiotensin-converting enzyme, as a competitive inhibitor of angiotensin, reduce vascular tension and produce a blood pressure-lowering effect. Patients with hypertension can reduce blood pressure after 24 hours of oral administration. It can also prevent the occurrence of high blood pressure and have a health care effect on normal people. 2. Sobering products: Corn peptide can inhibit the stomach's absorption of alcohol, increase the activity of alcohol dehydrogenase and acetaldehyde dehydrogenase in the body, and promote the metabolism and excretion of alcohol in the body.
