

Yellow Lentil Protein

Cat. No. AMRM-TVP009

Lot. No. (See product label)

Product Name

Yellow Lentil Protein

Description

Unlike other plant proteins which have a distinct taste requiring masking through the use of various flavour additives, yellow lentil protein has a neutral taste (mild lentil flavour), making it suitable to be added directly into existing food and beverage products.

Ingredients

Protein:87%

Fat:5-6%

Carbohydrates:Sodium:0.13%

Ash:2-3%

Applications

Leguminous proteins such as yellow lentil are generally regarded as valuable sources of amino acids, and are therefore often considered nearly as valuable as animal proteins or used as an alternative to them.

Colour

Yellow lentil powder has a neutral off-white colour which makes it ideal as a source for food formulations as it has little effect on the colour of the final product.

Odour

Unlike other plant proteins which have a distinct taste requiring masking through the use of various flavour additives, mung bean protein has a neutral taste (mild bean flavour), making it suitable to be added directly into existing food and beverage products.

Texture

Yellow lentil protein powder has a fine texture and excellent solubility.

Sustainability

Yellow lentil is a 'nitrogen-fixing crop' and are used in rotational crop farming. They require no fertiliser, reducing crop input costs significantly. Grain yields following yellow lentil plantings are higher, and after stripping and drying the lentils the dry matter can be used as eco-friendly green compost.

Storage

Store in a cool, dry area. Refrigerate after rehydrating.
