

Transglutaminase(FE-002)

Cat. No. FE-002

Lot. No. (See product label)

Product Name

Transglutaminase(FE-002)

Product Overview

Our transglutaminase is obtained by a fermentation process of the bacterium *Streptomyces mobaraensis*. The bacterium *Streptomyces mobaraensis* belongs to the genus *Streptomyces*, which occur mainly in soils, which produce fragrances such as characteristic smell of forest soil.

Description

Transglutaminase (TG) is a natural enzyme (protein) that is widely distributed in nature. There is transglutaminase of animal origin (used in medicine) and transglutaminase of bacterial origin.

Applications

Our transglutaminase is obtained by a fermentation process of the bacterium *Streptomyces mobaraensis*. The bacterium *Streptomyces mobaraensis* belongs to the genus *Streptomyces*, which occur mainly in soils, which produce fragrances such as characteristic smell of forest soil.

Storage

Stored in vacuum packaging and under refrigeration.
