

# Noise Monitor

Cat. No. FAD-054

Lot. No. (See product label)

---

## Product Name

Noise Monitor

## Product Overview

Noise monitors are mainly used in the farming industry. Environmental noise measurements are quantitative assessments of noise in a given environment. The results of environmental noise measurements can be used to determine the level of human or animal exposure to noise and to assess the potential for adverse health effects. The results of environmental noise measurements can be used to develop strategies to mitigate noise exposure and to inform noise control policies.

## Source

Environmental Indicator Detector

## Usage

Monitoring environmental noise.

## Feature

All-day monitoring, remote monitoring, solar-powered, high-precision measurement

## Type of Power Supply

Solar energy or DC

## Applicable Space

Mainly livestock farm
