

Water & Fertilizer Irrigation Monitoring Station

Cat. No. FAD-058

Lot. No. (See product label)

Product Name

Water & Fertilizer Irrigation Monitoring Station

Product Overview

Water & fertilizer monitoring station is a special instrument used in agriculture, forestry and livestock production to determine the water content and salt content of crops or soil.

Source

Facility Horticulture

Usage

Monitoring the water content and fertilizer content of crop soil

Feature

All-day monitoring, remote settings, intelligent optimization suggestions, automatic irrigation system

Type of Power Supply

Solar energy or DC

Applicable Space

Greenhouses, farmland

FOR RESEARCH OR FURTHER MANUFACTURING USE ONLY
