

Foliage Temperature and Humidity Sensor

Cat. No. FAD-061

Lot. No. (See product label)

Product Name

Foliage Temperature and Humidity Sensor

Product Overview

Foliage temperature and humidity sensors can prevent plant diseases caused by changes in foliar temperature and humidity in a timely manner, mainly for the measurement of plant surface temperature and humidity in greenhouses. Plant leaf surface temperature and humidity is an environmental element closer to plant physiology, whose temperature and humidity level has an important impact on plant leaf surface infection with pathogens.

Source

Facility Horticulture

Usage

Measuring plant surface temperature and humidity in greenhouses.

Feature

Real-time monitoring, remote settings, intelligent optimization suggestions

Applicable Space

Greenhouses

FOR RESEARCH OR FURTHER MANUFACTURING USE ONLY
