

Bovine Skin Peptide

Cat. No. PAE-050

Lot. No. (See product label)

Product Name

Bovine Skin Peptide

Package

25 kg/drum

Product overview

Bovine Skin Peptide refers to a peptide derived from the skin of cows or cattle. Peptides are short chains of amino acids that have various biological functions in the body. They can have potential benefits for skin health and anti-aging.

Description

They are often used in skin care products or supplements due to their potential collagen-boosting and moisturizing properties. Collagen is an important protein that gives structure and elasticity to the skin. As we age, the production of collagen decreases, leading to the appearance of wrinkles and sagging skin.

However, it is important to note that scientific research on the specific benefits and efficacy of bovine skin peptides is limited. Each individual may have a different response, and it is advisable to consult with a dermatologist or healthcare professional before using any skincare or dietary supplement products containing this ingredient.

Specification

Production process: The enzymatic Hydrolysis extraction process

Protein Content: $\geq 90\%$ by the Kjeldahl method

Solubility: Instant and Quick Solubility in cold water

Appearance

White to off-White Powder

Application

Skincare products, joint care products, snacks, sports nutrition products

Shelf life

2 years

Storage

Keep in a cool, dry, and clean place, Protect from moisture and direct light.

FOR RESEARCH OR FURTHER MANUFACTURING USE ONLY
