

Whey Peptides

Cat. No. PAE-060

Lot. No. (See product label)

Product Name

Whey Peptides

Package

25 kg/drum

Product overview

Whey peptides, also known as whey protein. or protein peptides, are a supplement derived from the liquid in dairy products called milk plasma. Whey peptides contain strings of amino acids linked together by peptide bonds. They have the same peptide bonds as those in proteins but are commonly shorter in length.

Description

These long strands of amino acids, provided by the whey peptides, are what build proteins in the human body. This is why people looking to gain muscle or have a faster recovery rate from strenuous workouts benefit from taking whey peptides.

Whey peptides come from the leftover milk plasma formed when any type of cheese is made from cow's milk. The whey peptides are harvested from the milk plasma and are then turned into three typical forms:

Concentrate: This type of whey peptide is low in fat but higher in carbohydrates.

Isolate: This type of whey peptide contains no fat and no lactose (a type of sugar). These are, on average, 90% protein by weight.

Hydrolysate: This is a whey peptide that is predigested, making it more easily absorbed by the human body.

Specification

80% Protein Hydrolysate

Application

Foods & beverages, Health Care Products

Features

No Additives, No Preservatives, No GMOs, No Artificial Colors

Shelf life

2 years

Storage

Keep in a cool, dry, and clean place, Protect from moisture and direct light.

FOR RESEARCH OR FURTHER MANUFACTURING USE ONLY
