

Albumin Peptides

Cat. No. PAE-061

Lot. No. (See product label)

Product Name

Albumin Peptides

Package

25 kg/drum

Product overview

Albumin Peptides (also known as oval protein hydrolyzate) are a kind of functional macromolecular protein in human plasma. It is an important component for maintaining plasma osmotic pressure, increasing blood volume, and providing balanced amino acids. It is an indispensable nutrient for the human body. Chicken ovalbumin and human serum albumin have very similar amino acid composition ratios. They have all 20 kinds of amino acids. They are the best proteins and can replace proteins for a series of physiological activities.

Description

Albumin peptides are a kind of biologically active small molecule peptides derived from chicken egg white, which is extracted by directional enzymatic digestion with multiple nucleases using modern bioengineering technology. The amino acid composition ratio of albumin peptide and human serum albumin is very similar, with all 20 kinds of amino acids, and its biological potency is as high as 94. It is currently recognized as the highest-quality protein and a natural substitute for human serum albumin.

Specification

80% Protein Hydrolyzed

Appearance

White Fine Powder

Application

Foods&Beverages, Health Care Products

Features

No Additives, No Preservatives, No GMOs, No Artificial Colors

Shelf life

2 years

Storage

Keep in a cool, dry, and clean place, Protect from moisture and direct light.

FOR RESEARCH OR FURTHER MANUFACTURING USE ONLY
