

Oyster Peptide

Cat. No. PAE-070

Lot. No. (See product label)

Product Name

Oyster Peptide

Package

25 kg/drum

Product overview

Oyster peptide is the application of peptide molecular biotechnology to the oyster processing process, and it is made into oyster peptide by enzymatic hydrolysis.

Description

The small molecular oligopeptides formed by this production method completely retain the original vitamins, trace elements and taurine of oysters, making the oysters rich in nucleic acid absorb faster than single amino acid or protein after being ingested by the human body. It is easier to be absorbed by the body, has more important biological activity in human metabolism, and can effectively increase the serum testosterone level in men. Compared with ordinary oyster products, it has higher biological potency and more important physiological functions.

Specification

60% oligopeptides

Application

Enhance male sexual function, protect liver, enhance physical strength, lower blood sugar and anti-tumor

Features

Being rich in amino acid composition and contains high essential amino acids and branched chain amino acids.

Shelf life

2 years

Storage

Keep in a cool, dry, and clean place, Protect from moisture and direct light.

FOR RESEARCH OR FURTHER MANUFACTURING USE ONLY
